

7.5 Conclusion

In accordance with 23 CFR 771.135(o)(1), the FHWA now makes the following determinations regarding the potential for the US 31 project to use Section 4(f) protected lands, as well as the potential for avoidance and minimization of harm to those lands during the future development of this project.

This evaluation has determined that no use of a Section 4(f) resource would be created by the development of Alternatives Cs, Es, G-C, and Preferred Alternative G-Es. Preferred Alternative G-Es avoids all Section 4(f) resources.
